SCANSHARE
Capture V4

The bridge between paper and electronic document flows
Process and analysis of inbound emails, from multiple email addresses
Saving in time, effort and money by automating daily work routines
### Barcode detection and smart page splitting
Zonal character recognition
Files conversion to a searchable format

Scanshare Capture is the powerful yet easy-to-use solution that lets you integrate your paper-based workflows, inbound emails and faxes to your document management systems, databases, corporate file servers and content management applications.

The user friendly and intuitive scanning client enables the users to enter key information (metadata) at the time of scanning, directly at the panel of your office multifunctional device. Scanshare Capture analyses, processes and delivers the digital documents to the destination of your choice.

Capture and convert your paper documents by using your office multifunctional device. Process with an intelligent barcode detection, smart page splitting, zonal character recognition. Store your document to a variety of locations including a large selection of 3rd party applications.

KEY FEATURES

POWERFUL DOCUMENT ENGINE
output to many formats in many languages, including searchable PDF, PDF/A, TIFF, Microsoft® Word, Microsoft® Excel and JPEG as standard

SMART EXTRACTION
automatic barcode and QR code recognition and document zone analysis drives business processes directly from the data stored in your files and emails

SINGLE SIGN-ON
authenticate seamlessly with existing network credentials via Active Directory or OAuth; automatically grant access to specific workflows and shared resources for each user, or existing Active Directory groups

CONNECT TO A HOST OF SYSTEMS
deliver your data via email, to a file server, or your favourite cloud storage provider; integrate directly to popular DMS, ERP and CMS applications, or create your own connector with Scanshare's SDK framework.

WHY YOU SHOULD BUY IT

Simple to use, wizard-based document workflow creator

Improve daily office routines related to document capture, processing and distribution

Easy and intuitive capturing solution

Data integration: link to existing client data from CRM systems, financial information from ERPs and corporate databases; dynamically browse through file systems to select an archive directory, from the multifunctional panel

It retrieves documents from different sources, then processes and delivers them, requiring no manual intervention

Receive scanned documents as attachments to an email address or via the FTP protocol
