

Licence Kits for Colour MFPs

To enhance the functionality of the d-Color MF series a range of Licence Kits are available.

When ordered, the Licence Kits supply an activation code to allow specific functionality, for certain fonts to be used or barcodes to be printed, as well as enabling searchable PDFs and access to the majority of applications used in every day business environments, which are already resident, but dormant, in the MFP's firmware.

Among the Licence Kits is a web browser for user access to the Internet and intranet, from the operator panel, without the use of a PC, and direct printing of emails, web pages and PDFs.

UK-211 & UK-204

Licence Kits have to be "unlocked" so in the lower to mid volume machines of the current (from 2015) d-Color MF range, especially, it is necessary to install the **UK-211**, which is an additional 2GB memory. This is required in order to activate the Licence Kits and to have full device functionality if the Web Browser/IWS is activated.

The UK-211 Memory is required for Banner Printing, essential when using the PostScript Driver. It is also recommended when using the PCL Driver for the d-Color MF259 through to the d-Color MF369, for the Copier Overlay Function (all models) and Licence Kits (all models).

For the **d-Color MF759 and older models of the d-Color MF range, dating pre-2015**, the equivalent Licence Kit is the **UK-204**. Like the UK-211 it has to be installed whenever a Licence Kit is added.

A3 COLOUR MFP SOLUTIONS

Licence Kits for Colour MFPs

LK-101 v3

This is a Web Browser and Image Panel and supports Web Standards such as FlashLite 3.1.7. It enables the display, printing and saving of content on the Internet and intranet. Scanned document data can be uploaded to the Internet or to intranet servers, as well as files from boxes

LK-102 v3

This enables the PDF encryption function, PDF/A 1b support and Meta data, which can be used in conjunction with Olivetti's Document Workflow solution, Scanshare, as it is a variable that can be referenced in other processes or when storing data and files.

LK-105 v4

This can create an OCR Searchable PDF file when scanning, by creating layers of images, which makes document identification and retrieval simple.

LK-106

Allows bar code printing to be supported from the d-Color MF range by the standard controller with additional fonts to support bar coding. These MFPs are ideal to print bar codes because they provide excellent barcode print quality.

LK-107

Unicode Font printing is ideal for SAP. The Unicode standard is a character encoding system designed to support written texts of languages with different characters. Unicode was developed to solve the challenge of international character support.

LK-108

OCR engines attempt to identify the language of text in order to better read the document, so this Licence Kit enables OCR Font Printing, allowing text to be recognised and printed as it should look.

LK-110 v2

This Licence Kit can convert scanned files into various Microsoft formats including Word, Excel and Powerpoint to deliver convenience and ease of use.

LK-111

Provides a native ThinPrint Client to compress files by up to 98% making printing faster and freeing up network resources.

Using a ThinPrint enabled printer the process is even more efficient with compression used for every step of the print process right up to the device. This can be particularly useful when implementing follow-me and secure print to multiple branch offices.

LK-114

This is a FollowMe printing solution using one of the MFPs as a storage device, instead of a print server, to store and spool print jobs.

Print jobs can be received/printed at any device belonging to the Pull Printing group, as in a regular FollowMe print environment being based on a server with a dedicated application.

LK-115v2

Trusted Platform Module (TPM) to enhance security levels, by securely storing passwords, certificates, or encryption keys.

NEW LK-116 - Bitdefender®

This is an anti-virus solution for the new A3 Colour MFPs, the d-Color MF259, d-Color MF309 and d-Color MF369. Bitdefender® provides real-time Virus Scanning of the MFP jobs such as print data, Scan-TX data, i-Fax Transmitted/Received data.

In addition, manual and/or scheduled virus scanning of User box, SMB folders, MFP system can be set.
